

What is online backup?

Online backup is the ability to backup your computer over a standard internet connection.

It eliminates the need for time consuming, and error prone manual backup systems like tapes or CDs. Backup virtually any system running a Microsoft Windows operating system – from laptops to your business data server. Store your data securely off site to eliminate the total loss of data from fire, natural disaster, or theft. Data is stored in a compressed, encrypted form, so only you can access and recover it. Store multiple versions of a single file, and roll back to any previous version simply and easily. Backup or restore your data from anywhere in the world, whether you are in your office or on the road.

Whatever your business, Keep it Safe!

Join the many businesses using our service.

Accountants, Real Estate Offices,
Chambers of Commerce, Art Galleries,
Publishing Companies, Retail Stores,
Gourmet Food Shops, Law Firms,
Consulting Firms, Florists, Landscape
Design Companies, Medical Practices,
and more...

Why do I need online backup?

All businesses rely on computer managed data to serve their customers. Yet most small businesses have poorly designed backup strategies or no strategy at all. They are literally a computer crash away from going out of business. The same applies to most consumers' PCs.

- Do you backup your PCs, laptops, and servers every night? Even a few hours of lost productivity recreating yesterdays work easily pays for daily backup.
- Have you ever tested your backup solution to see if you can restore files? Many tape backups fail, or are not done properly and cannot restore lost files.
- Have you ever accidentally deleted a file, or wish you could go back to yesterday's version? You can restore deleted files, or roll back to an old version with a few mouse clicks.
- 25% of PCs sold are Laptops which are much more susceptible to data loss or theft.
- Analysts report many small businesses keep their most critical data on PCs and notebooks rather than servers.

How does it work?

echoSafe backup is an easy-to-use program that installs on your computer and backs up your data over any internet connection, from dialup to broadband.

The easy to follow Setup instructions, together with our Backup Guide will walk first time users through the steps of connecting to the backup server, configuring backup sets, creating a backup schedule, and selecting a secret encryption key.

echoSafe is fully customizable to allow you to automatically include or exclude files, or file types from the backup set. echoSafe will automatically search through your hard drive to find the data files so you don't have to.

All files are compressed and encrypted on your computer before they are sent to the echoSafe backup server. They are stored in this compressed and encrypted state, so no one can access the data but you.

echoSafe uses advanced technology to transmit only the data that has changed between backups. This greatly reduces the time required for a backup once the initial backup has been preformed.

You have complete control over what data is backed up and how often backups occur. You can also control how many days of backup data are stored on the echoSafe server.

Plans and Pricing

Full Monitored Backup Service

	Monthly Fee (U.S.\$)	Storage Size
	\$ 9.95	250MB
	\$19.95	1GB
	\$29.95	2GB
	\$39.95	4GB
Storage Upgrade*	\$19.95	5GB

* Storage upgrade only available with 4GB plan.

Volume discounts available for 29GB+ accounts.

All systems are subject to a \$29.95 initial setup fee. Service is based on a one-year subscription. On site setup/system consulting is available at hourly rates.

Billing is determined by the maximum continuous usage for the month. If you exceed your initial tier level, you will be contacted to authorize usage at a higher level, or to help you return to your desired tier.

Use the first 15 days of storage space on our secure servers with NO OBLIGATION.

At the end of that trial period you will be contacted to complete billing arrangements. If you don't agree that our online backup service is worth the fee, you can simply tell us to stop the service.
